

Hörbar

A single-file German learning app. No build step, no dependencies, no server — one HTML file that runs offline in the browser.

Built for learning German in Switzerland (Swiss spelling: `ss` rather than `ß`).

What's in it

Wörter — 2,044 words and 150 phrases across 60 themed sets.

- Each entry is spoken aloud: the word, a pause, then an example sentence
- Auto-play works through a whole set hands-free
- Slow mode, repeat, and a listening-first mode that hides the English
- Phrase sets cover real situations — the council office, the doctor, a job interview, parents' evening, small talk, the phone. Each speaks your line, then a likely reply

Grammatik — 54 topics, 946 exercises, A1 to B1.

- Follows the standard A1–B1 grammar progression, in order
- Every topic opens with conjugation and declension tables, reachable at any time via the **Formen** button
- German grammar terms carry English glosses (Akkusativ → *direct object*)
- Fill-in-the-blank and multiple choice, checked with an explanation of *why*
- Answer checking is forgiving: case-insensitive, punctuation ignored, `groesser` accepted for `grösser` , and alternative correct answers allowed
- Progress saved per topic

Running it

Open `index.html` in any browser. That's the whole setup.

On an iPhone

1. Open the page in Safari

2. Share → **Add to Home Screen** — it then opens like an app, offline

For audio, a German voice must be installed: **Settings → Accessibility → Spoken Content → Voices → German**

Audio stops when the screen locks, so keep the screen awake during auto-play.

GitHub Pages

With this repo on GitHub: **Settings → Pages → Source: deploy from branch → main → / (root)**. The app is then live at `https://<username>.github.io/<repo>/`.

Technical notes

- One file, ~385 KB, no external requests
- Speech via the browser's built-in `SpeechSynthesis` API — no audio files, no network
- Progress stored in `localStorage`, wrapped so it degrades gracefully where storage is unavailable
- Prefers a `de-CH` voice, then `de-DE`, then any German voice

Content

All vocabulary, example sentences, grammar explanations and exercises are original, written for this app. Nothing is reproduced from any textbook or published word list.

Licence

MIT for the code. Do what you like with it.
